EDUCATION

Indian School of Business | GMAT FE 735/805 (99.5%ile, 770 Classic equivalent) Apr '26-Apr '27

- **ELP, Microsoft** (Ongoing): prioritising **8 legal AI use cases** for Copilot's lead, partner or defend calls against incumbents & new entrants
  - Mapped **4 segments and 9 workflows** from research with practitioners across 30+ organisations, guiding product & partnership calls
  - Developing **agentic AI white spaces** for Microsoft to enter legal matter management & analysis workflows, defining the entry wedge
- **National Winner**, Accenture Challenge (1 of 2.8K+, **PPO awarded**): built agentic-AI app tracking dealer leads across 1,050 retail outlets
  - Traced 2.2pp market share loss to 62% untracked dealer leads, then modelled 4.8pp net share recovery worth **₹1,405 Cr** at 3.2x ROIC
- **Campus Finalist**, PwC (Top 5/200+): sized **₹736 Cr** of upside on ₹200 Cr AI spend for a ₹5,600 Cr fashion retailer, redeploying 4.7K FTEs

Indian Institute of Technology Delhi | Bachelor of Technology | JEE Main AIR 3,709/11.5+L (99.7%ile) Jul '19-May '23

- Secured **₹4L industrial research grant** (5 of 100+ awarded) for 2 consecutive years, funding 192-cell Li-ion battery pack prototype build
- Published research paper (9.8K+ accesses, 15+ citations) in **Nature Portfolio**: built a microarray fixture for 5x cheaper cancer pathology
- Designed & built **₹60K autosampler**, 50x cheaper vs ₹30L commercial unit, automating sterile sampling on continuous bioreactor runs
- Intern, Chakr Innovation (metal-air R&D): hired as **Senior Engineer** straight out of internship, bypassing standard graduate entry grade

EXPERIENCE

Vecmocon Technologies | EV intelligence firm, $18M Series A | Founder's Office (Product Management) | Noida **May '24-Apr '26**

*Builds **Battery Management System (BMS)**, chargers, IoT and swap-station software for EV OEMs, fleets & India's battery-swap networks*

- *Led **BMS Applications team of 4**, running roadmap, backlog and sprints with engineering, design and QA for 30+ OEM & fleet accounts*

Customer Discovery & Commercial Outcomes

- Built out **BMS Applications in 3 months**, replacing founder-led support with a standalone, cross-functional customer delivery function
- Ran discovery across 6-7 parallel programmes, turning **user pain** into a **300+ item Jira requirement backlog** plus the PRDs behind each
- Ran **500+ customer calls a year** across discovery, spec reviews and escalations, so what users said turned directly into the next release
- Designed for Indian road, load and duty cycles by mapping **e-rickshaw and 2W rider personas** onto capacity, range and charging limits
- Delivered **₹3.4 Cr** FY26 BMS revenue (10% of company revenue) & established ₹18 Cr FY27 pipeline from confirmed launches (~5x YoY)
- Authored and submitted 3 government bids worth **₹7.5 Cr**, now in final evaluation, mapped to national EV and battery-swap priorities
- Grew **~50% of FY27 pipeline** from customers who came back, by turning field escalations into fixes that shipped back to every account
- Flagged **₹2 Cr launch revenue at risk** from delays, then resolved 5 recurring bottlenecks, cutting requirement-to-release cycles 25-30%
- Earned the company's highest individual performance rating (**5/5**, top band), recognised for delivery turnaround & customer retention

Product Decisions & Releases

- Shipped **OTA releases** over MQTT to fielded vehicles, running 6-7 release cycles per customer to production across 30+ OEM accounts
- Grew **adoption** to **20,000 units in the field** across automotive and industrial users, adding **~3K units a month** on the same release train
- **Prioritised 5 of 30+ accounts** over spreading team thin, scoring each account on revenue, complexity, support load and strategic value
- Cut charge-estimate error to **±1%** (vs ±10%) across the fielded base, giving fleets and riders a dependable read on real remaining range
- **Bajaj and Exide**: enabled 5.4 kWh Riki e-rickshaw launch as lead contact, aligning stakeholders across 3 firms, from spec to production
  - Mapped all vehicle data to **Bajaj consumer standards** and homologation caps across Indian geographies & real duty-cycle edge cases
- **Battery Smart**: owned the BMS, charging, IoT and analytics as a single platform account for India's largest swap network (**270K+ packs**)
  - Lifted fleet unit economics, asset efficiency and pilferage control through **offline PIN authorisation**, idle-drain caps and BaaS models
- **Tata Power and Amara Raja**: unlocked white space by extending and piloting BMS applications from e-mobility into stationary storage

Platform, Data & Guardrails

- Shaped the **3-year roadmap across 4 product lines**, screening next-gen tech on feasibility, data, market pull and commercial fit in India
- Opened low-volume segments by productising charge and health **features** into **modular software SKUs**, cutting customisation 20-30%
- Owned the **versioned API & data contract** across **1,250+ signals** between vehicle, charger, app and cloud, keeping OEM teams aligned
- Achieved **~90% first-pass release acceptance** by gating each release on acceptance criteria, validation evidence and root-cause closure
- Built delivery governance that lifted on-time delivery from 65% to **90%** and cut escalation closure **10-15 to 6-8 days** across 100+ tickets
- Cut test time **80%** and dev lead time 60% with a Python **regression suite of 60+ BMS validation cases**, freeing 500+ engineer-hours/yr
- Built an **internal test dashboard** with **agentic AI coding tools** for QA, so each release reached sign-off & SOP with written test evidence
- Improved battery safety **beyond national standards** with a 9-trigger system catching overheating and escalating faults ahead of failure

Chakr Innovation Pvt Ltd | Cleantech firm | Senior Engineer: Battery Development | Gurgaon **Jun '23-May '24**

*Develops aluminium-air batteries for **commercial and industrial fleets**, aiming at much longer range & quicker refuelling than lithium-ion*

- *Joined as **Senior Engineer**, leading cell architecture, prototype testing and the fleet unit economics for initial 1,000-vehicle launch plan*

Product Development

- Cut vehicle turnaround to **3 minutes** against hours of lithium charging, designing and shipping two generations of **1,000L swap stations**
- Unblocked **fleet deployment at scale** by cracking cold restart, the core deployment blocker, recovering **~70% of peak energy** after idle

IP & Launch Planning

- Built a defensible IP position by filing a patent on a novel compact cylindrical metal-air architecture, opening fleet and off-grid markets
- Built the go-to-market and operating plan for a **1,000-vehicle launch**, converting lab technology into a costed, deployable fleet service

EXTRACURRICULARS AND AWARDS

Axlr8r Formula Racing, Indian Institute of Technology Delhi **Sep '19-May '23**

*Student team designing, building & **racing open-wheel electric cars** worldwide; 30+ members and ₹1.5 Cr programme budget per season*

Product Build & Trade-offs

- **Co-Team Captain**: led all 30+ members across design, manufacturing, electronics, testing & sponsorship as single cross-functional lead
- Progressed up through **4 roles in 4 years**: trainee, junior engineer, chief engineer over 6 mechanical systems, then co-leading the team
- Ran the build around **design-freeze, manufacture & test gates**, tracking progress, resources & slip risk every week across departments
- Owned the **₹1.5 Cr annual programme budget** across build, testing and racing, chairing weekly finance reviews and trimming cost 15%
- Funded build by raising **₹60L from 30+ sponsors** including Haldiram's, Escorts, Schaeffler & Bessey, renewing every one of them yearly

Validation, Judging & Mentorship

- **Won FSAE Italy 2022 Cost & Manufacturing** event (1/35, 100/100 points), defending the car's full build costs & make-or-buy decisions
- Secured **9 podium finishes** across 4 competitions, incl. 3 cost analysis and business-pitch wins in FS Australasia, Italy & Formula Bharat
- Judged **Cost & Manufacturing** at Formula Bharat 2025 across 38 teams as the youngest of 3 final-round judges, 3 years after winning it
- Mentoring **3 Formula Student teams** through car development, competition preparation, cost documentation and engineering careers

AI & build: Claude, Codex, Lovable, Python, GitHub, Vercel, Jira | **Table Tennis:** district-level player, IIT Delhi team & Girnar House captain
